

1 mark question explanations

Sure! Here are **2-3 line answers with simple examples** for each 1-mark question

✓ 1. What is CLR?

CLR (Common Language Runtime) is the execution engine of .NET. It manages memory, exceptions, and converts MSIL code to machine code.
Example: When you run a C# program, CLR executes it safely.

✓ 2. What is JIT?

JIT (Just-In-Time Compiler) converts MSIL code into native machine code at runtime so the program can execute.
Example: When a C# method is called, JIT compiles it into CPU instructions.

✓ 3. What is Abstraction?

Abstraction hides internal details and shows only important features to the user.
Example: You use a "Send()" method of Email class without knowing its internal code.

✓ 4. Explain Label, Label and TextBox control with properties.

- **Label** – Displays read-only text (Property: ``Text``, ``Font``).
 - **TextBox** – Used for input (Property: ``Text``, ``MaxLength``, ``Multiline``).
- Example: Username textbox and label "Enter Name".*
-

✓ 5. What is Indexer?

Indexer lets an object be accessed like an array using `[]`.

Example:

```
myObj[0] = "Hello";
```

✅ 6. Differentiate between Data Adapter and Data Reader.

- **DataReader** → Fast, forward-only, read-only data.
- **DataAdapter** → Reads and writes data between database and DataSet.

Example: Use DataReader for reading only, DataAdapter for CRUD.

✅ 7. What is FCL?

FCL (Framework Class Library) is a collection of reusable classes, namespaces, and methods in .NET.

Example: `System.IO`, `System.Data`, `System.Collections` etc.

✅ 8. Define Inheritance and its types.

Inheritance allows one class to use properties of another class using `:`.

Types: Single, Multilevel, Hierarchical, Hybrid.

Example: `class Dog : Animal { }`

✅ 9. What is ListView control?

ListView displays items in different views like Details, List, Tiles, or Icons.

Example: Showing files in Windows Explorer.

✅ 10. What is ADO.NET DataSet in C#?

DataSet is an in-memory container to store multiple tables temporarily.

It works in disconnected mode.

Example: Fetching a student and marks table together.
