

Unit 3

1. Explain functional testing.
2. Explain boundary value analysis.
3. Explain cause effect graphing.
4. Explain test cases and criteria.
5. Explain the psychology of testing.
6. Explain types of testing.
7. Explain structured programming.
8. Define: Information hiding, regression testing, Equivalence class partitioning.
9. Explain top down and bottom up testing approach.

Unit: 4

1. Explain COCOMO model.
2. Explain Software configuration management.
3. Explain Software Risk management.
4. Explain software reliability metrics.
5. Explain ISO 9000 certification for the software industry.
6. Define: verification, validation, project risk, software reverse engineering.
7. Explain SEI CMM model.
8. Explain CASE.
9. Explain Objectives of software quality management.
